خلاصه مقاله:

Given the growing importance of ornamental fish to our country, the huge volumes of imports are reported. Most of the imports come from Southeast Asian countries and unfortunately make some problems for Iranian ornamental fish producers and also cause damage to the national economy. It is obvious that if we can improve the production efficiency of ornamental fish, besides supplying the Iranian consumers' needs, we can increase our exports to other countries. Since, Isfahan is the greatest ornamental fish producer city in Iran, this study was designed to review and evaluate the statue of Ornamental fish industry in Isfahan. A number of questionnaires were prepared, and then, they were answered with the ornamental fish sellers and producers, in all over the city. All data analyzed with excel software. The results showed lack of proper condition for research, lack of proper education and promotion activities, high cost of fish producing and aquarium accessories, lack of incentive mechanisms for ornamental fish producers, absence of governmental support for private R&D centers of ornamental fishes.

کلمات کلیدی:

Ornamental fish production, Isfahan city
