خلاصه مقاله:

Background and objective: The main responsibility of the health system is improving health level. The purpose of the study is to examine on-call specialist from theory to practice. Methods: In this qualitative study, 27 experienced management of hospitals, and specialists were the participants. Data were collected through semi-structured interviews and the snowball method of data collection continued until the saturation of data. Then transcriptions of the interviews, deciding the meaning-based units, coding, categorization according to the similarity and symmetry, identification of themes were carried out. Afterwards, with the help of content analysis method the themes were analyzed. Results: In the present study obtained 4 axis and 11 areas from Resident program. The themes like the society and government attitude, accountability of the centers, indices in theory and practice had the same results. The themes like finance, human resource, infrastructure, way of program implementation, and paying the physician they are far from the theory. Conclusion: Regarding the opportunities and threats, and pros and cons of implementation of program, the findings can yield a more comprehensive model compared to the perception currently. Managers and experienced individuals of health system have in the face of the implementation of the program

کلمات کلیدی:

on-call doctors, specialists, development of health system plan, qualitative research
