خلاصه مقاله:

Increasing human activities on the planet have caused the function of the soil part, which is part of the earth's crust and as one of the pillars of the environment and a key part of the chemical-environmental cycle, in some cases is disrupted and receives large amounts. Pollutants such as particulate matter from power plant chimneys, accumulation of heavy metals, etc. are also considered. Heavy metals accumulate in the soil over time due to their low concentration and non-degradable environmental pollutants. Therefore, it is necessary to study the concentration distribution of heavy elements to monitor soil pollution and preserve the environment. Contaminant used in soil

کلمات کلیدی:

Soil, pollution, heavy metals
