

عنوان مقاله:

An Introduction to Ocean Energy Technologies

محل انتشار:

اولین کنفرانس انرژی های تجدیدپذیر و تولید پراکنده ایران (سال: 1388)

تعداد صفحات اصل مقاله: 6

نویسندگان:

Mohammad R. Aghaebrahimi - *Department of Electrical Engineering as an assistant professor, Birjand University, Iran*

.Mayssam Amiri - *Shiraz Electric Power Distribution Co*

خلاصه مقاله:

Oceans, large lakes and bays are huge reservoirs of various useful and renewable energy recourses. World's total estimated ocean energy reserves are about 130 TW. However, only a small fraction can be recovered economically. Ocean wave energy, Tidal energy, salinity gradient energy, energy from ocean currents, thermal energy, geothermal energy, chemical energy, and ocean biomass energy are the types of ocean energy. This paper gives an overview of various ocean energy technologies1

کلمات کلیدی:

ocean energy, ocean energy technologies
