خلاصه مقاله:

The Forester Navigation Application (FNA) is a new software application specifically developed for providing mobile training to the workforce in environmental organizations. The user interface of FNA is comprised of 6 main menus and 17 subsets. The menus include navigation, training, support, chat service, familiarity with protected areas, and foresters' duties. Foresters can use FNA to proceed with their mandate, become acquainted with protected environments, and prevent environmental violations.

کلمات کلیدی:

Navigation, Forester, Mobile Learning
