خلاصه مقاله:

In this paper we show that every finite nonabelian p -group G in which the Frattini subgroup $\Phi(G)$ has order p^{ℓ} admits a noninner automorphism of order p leaving the center $Z(G)$ elementwise fixed. As a consequence it follows that the order of a possible counterexample to the conjecture of Berkovich is at least $p^{8\ell}$.

کلمات کلیدی:

p -groups, automorphisms, noninner automorphisms
