خلاصه مقاله:

In this work systems of sines $\sin \left(n + \beta t \right)$, $n=1, 2, \dots$, and cosines $\cos \left(n - \beta t \right)$, $n=0, 1, 2, \dots$, are considered, where $\beta \in \mathbb{R}$ is a real parameter. The subspace $M^{\{p, \alpha\}}(\cdot, \pi)$ of the Morrey space $L^{\{p, \alpha\}}(\cdot, \pi)$ in which continuous functions are dense is considered. Criterion for the completeness, minimality and basicity of these systems with respect to the parameter β in the subspace $M^{\{p, \alpha\}}(\cdot, \pi)$,

کلمات کلیدی:

Basicity, System of sines, System of cosines, Morrey space
