خلاصه مقاله:

Today, extensive changes have taken place by the development and growth of technologies in the field of learning and education. Mobile learning has emerged after e-learning; it allows access to information anywhere and anytime. The way in which individuals access information emerges as the center of social, occupational, and educational habits. The purpose of this study is to investigate the role of mobile learning, which is done using new wireless technologies in a portable platform and learning can be done anytime and anywhere. The research method is applied and descriptive-analytical and the statistical population includes all fourth grade elementary school students in Najafabad city which is ۱۰۲۰۰ people and the sample size of the random method is ۱۰ people. Data collection in this research is a researcher-made questionnaire. The results showed that mobile learning facilitates interpersonal interactions. Mobile learning provides people with new facilities and capacities in the field of education and facilitates learning.

کلمات کلیدی:

Mobile learning, education, technology
