خلاصه مقاله:

Uncontrolled and unplanned development of large and medium-sized cities of the country of Iran have the formation of new textures in the vicinity of urban cities, displacement of residents and urban land use of new areas in the past few decades. Neighborhoods of Baghe Melli, Agha, Hakim Nasrollah, Shadmand and Shahid Yazdani were selected as areas of study in this paper, which are not exceptions from the aforementioned phenomena and are considered among the most eroded textures of the country. The statistical population of the study included the household residents of Shahreza's neighborhoods, with a population of ۱۰۵۶۸ people, according to the census of ۱۳۹۰. Cochran method was used to select the sample size: ۱۲۰ households. This study is applied in terms of purpose and descriptive-analytic in terms of the method. We used field studies, such as interviews and questionnaires to collect the data, and the obtained results via QSPM-AHP- SWOT models and analysis show that the lack of facilities, urban services and infrastructure have caused migration of indigenous inhabitants to other areas of the city. It is our hope to find a solution for the problems of eroded textures of Shahreza city, by using appropriate strategies and solutions.
