خلاصه مقاله:

The atlas includes ۳۸ maps and schemes on geology, geophysics and seismology. The choice of materials is based on the requirements of compiling maps of seismic zonation, geodynamic test-grounds, etc. The main scale of the maps is 1:500000 or 1:200000, and the scale of the schemes is 1:100000 or 1:250000. It is the first attempt at generalization of various available materials. The atlas consists of ۶ sections
