خلاصه مقاله:

This study aimed to determine the effect of video education about hypoglycemia on knowledge of diabetes mellitus patients and their families. This type of research is a quantitative study with a pre-experiment method. This study was divided into two populations, namely the population of type ۲ diabetes mellitus patients total of ۱۶۲ people, and the families of diabetes mellitus patients total ۱۶۲ people. In the population of diabetes mellitus patients, the sample used was ۳۰ respondents who were divided into two groups, namely ۱۵ respondents in the experimental group and ۱۵ respondents in the control group. In the population of family diabetes mellitus patients, the sample used was ۳۰ respondents, who were divided into ۱۵ respondents for the experimental group and ۱۵ respondents for the control group. The sampling technique was carried out by non-probability sampling with a purposive sampling technique. The results of the analysis using the paired t-test obtained a p-value of ۰.۰۰۱

کلمات کلیدی:

Diabetes Mellitus, video education, purposive sampling technique, quantitative study
