خلاصه مقاله:

AbstractHealth care networks in different societies are the foundation of physical and mental health of individuals and prerequisites for sustainable developmentHealth networks operate as a subset of universities of medical sciences and health services with the aim of providing health care through the generalization and expansion of health, medical and educational services. In this article, we present a model to evaluate the efficiency and step by step improvement in the health care networks of Ahvaz Jundishapur University of Medical Sciences. At first, using previous studies, performance evaluation criteria in the field of health care network were identified, then, by interviewing experts, the evaluation criteria were finalized. The results showed that out of ۱۸ health care networks of Ahvaz Jundishapur University of Medical Sciences, ۹ health care networks are inefficient and using the model presented as a model, in order to improve the health care network step by step Was taken.Keywords: Performance evaluation, step by step improvement, Health Network, Ahvaz Jundishapur University of Medical Sciences
