خلاصه مقاله:

Microgenetic method is a specific method for studying change in abilities, knowledge, and understanding during short time spans, through dense observations, and over a relatively long period of time. In this paper I will attempt to provide a brief overview of microgenetic method and will point out its potential advantages and disadvantages in the context of second language acquisition. To illustrate the utility of microgenetic method in SLA research, I will then discuss a SLA-related issue which could be addressed via this research method, namely the effects of written corrective feedback on L2 acquisition.

کلمات کلیدی:

Microgenetic method, SLA, Corrective Feedback, Writing
