## خلاصه مقاله:

Today, resistance is a topic that has been considered in the national arena. The importance and breadth of this issue has led to an examination of aspects and according to different indicators. Among these indicators, production and employment can be mentioned. Indeed, unemployment and national production are indicators that indicate a boom or recession that plays a significant role in the country's economy. The importance of this issue has led to this paper also initially describes production and employment within the framework of Islam and the role of resistance economics in realizing this issue. In fact, the purpose of this study is to examine the production and employment from the point of view of Islamic economics with a resilient economy approach. In this study, the effect of production, employment, and other economic variables on the resistance economy during the period (۱۹۶۱-۲۰۱۲) was studied using the wide-gap interval method (ARDL). The results of this study indicate a positive relationship between national production and inflation with resistance economy and negative relationship between other variables such as liquidity, interest rate, unemployment rate and monetary base with resistance economy.

## کلمات کلیدی:

(employment, production, resistance economy, inflation, (ARDL
