## خلاصه مقاله:

These days, the world has been involved in the corona pandemic and that has caused damage to some social concepts and structures in urban life. Hence the need, on the one hand, Expanding the structure of smart cities to prepare cities for the repetition of similar events as well as strengthening the position of people in the new generation of smart cities (responsive cities) and raising awareness of climate problems and the need for cities to resilience with these phenomena, Plan the future of cities to be somewhat flexible and adaptable in the face of such events. Meaning is one of the social (objective-subjective) phenomena that is perceived by citizens and causes mental sharing with each other. This can be shaped by people s understanding of the essence of cities And Also to urban designers to create structures based on the common meaning and collective memory of residents, Help to provide a responsive .and creative environment based on the real needs of citizens in urban life in collective places

## کلمات کلیدی:
