خلاصه مقاله:

Failure of multiple teeth eruption is a rare dental anomaly. Various local, systemic or genetic factors implicated in this condition, or it may be an Idiopathic phenomenon. Here we describe an Iranian young female with multiple teeth impaction who is free from any systemic disease or syndromic condition. This patient was managed successfully by interdisciplinary treatment. Based on clinical presentation and radiographic examination this paper discusses the differential diagnosis and management of this case.

کلمات کلیدی:

Failure of eruption, multiple teeth, eruption
