خلاصه مقاله:

The environment is a necessity of human life and a complement to the progress of any human civilization and new technologies. Man has realized today that the only way to sustain his works and technologies should be in harmony with the environment and not in opposition to the environment around him. In the present age, we are witnessing the modeling of environmental components and the use of new science and sustainable technologies in order to make the best use of nature and its place in improving the mental and physical condition of human beings, so nature itself is a complete reference to The title is a correct and suitable model for all the artifacts of the universe that is made by human hands. Architecture, as a new and influential science in the world that is directly related to people and their lives, is necessary in addition to maintaining the role and position of the environment, to be modeled on it and move in the direction of sustainable components in line with it. Take it. Therefore, in the present study, using analytical and descriptive research methods and reviewing library resources, we seek to prove the necessity of creating a correlation .between the environment and sustainable architecture modeled on it in creating a magnificent architectural work

کلمات کلیدی:

The environment, New technologies, Environmental components, space design, Sustainable Architecture
