خلاصه مقاله:

In this paper, we propose a new approach for ranking all fuzzynumbers based on revising the ranking method proposed by Ezzati et al. cite{Ezzati}.To this end, we present and investigate some properties of the proposed approach indetails. Finally, to illustrate the advantage of the proposed method, it is applied to several groups of fuzzy .numbers and the results are compared with other related and familiar ones

کلمات کلیدی:

Ranking of fuzzy numbers, Parametric form of fuzzy number, Magnitude of fuzzy number
