خلاصه مقاله:

Introduction: Triage is the process of prioritizing patients based on their medical needs. Triage nurse is essential for the triage process. Variety of systems used to triage patients in the emergency department in developed countries. The aim of this study was to evaluate the triage situation in hospital emergency departments of Tabriz. Methods: this is a descriptive study performed on ۱۷۶ emergency physicians and nurses from emergency departments in Tabriz. By using questionnaire Data gathering instrument was. Data analysis was done as descriptive statistics in SPSS ۱۴. Findings: The findings illustrated the triage of emergency departments is organized, focusing on personnel who perform triage, as well as the facilities, resources and triage procedures. However, the results indicated that the essentials of triage in Tabriz emergency department are not integrated. About ۶۸.۸% of respondents declared that there are not specialized nurses for emergency department. About ۷۳% of respondents stated that there is not triage station in emergency department. About ۶۵% of respondents declared that patients are triaged in the emergency department hall. Conclusion: Due to the lack of standardized and organized triage system in terms of allocation of human resources and prioritize patients, further research on triage in emergency departments, particularly in the areas of health personnel and more attention of health authorities for the implementation of standardized triage system is emphasized.
