## خلاصه مقاله:

Given the dependence of developing and underdeveloped countries on the single-product economy such as oil and agriculture, this study sought to increase the supply of non-oil commodities by exporting appropriate solutions. Commercial ports and free zones can make a major contribution to export progress, but before investing in this area, steps must be taken to generate and refine economic infrastructure in all sectors. Given the specificity of the economic and political conditions of Iran, ways must be provided within a reasonable time. Given the results of the research on export-oriented economic growth in free trade zones, government policy solutions for WTO membership, expanding trade relations with neighboring countries, outsourcing export to the private sector, developing e-commerce, facilitating export bureaucracy. Commodities, investment in commercial and industrial ports, expansion of customs in terms of capacity and technology, modern marketing and demand creation in target countries are suggested.

## کلمات کلیدی:

Export and import management, commercial areas and ports, economic growth, International trade
