خلاصه مقاله:

The family Gramineae, due to its great number of species and worldwide distribution, is one of the large and well-known family in the plant kingdom. All the species in this family are homotypes and are found wherever plant growth is possible. At present, more than ۱۰,۰۰۰ species in ۶۲۰ genera belonging to ۶۰ tribes of this family are known from all over the world. In Iran, besides many research works which have been carried out so far, TERMEH (۱۹۸۷) while revising the family, introduced ۱۱۷ genera, ۴۰۶ species, ۱۰ subspecies and ۵۴ varieties for Iran. In addition, reference should also be made to the following taxa recorded from Iran: *Bromus racemosus* (ASSADI & WENDELBO ۱۹۷۷), *Agropyron caninum* (ASSADI ۱۹۸۳), *Briza humilis* (ASSADI ۱۹۸۴), *Dactyloctenium aegyptium* (MOZAFFARIAN ۱۹۸۵), *Glyceria caspica* and *Backmanici eruciformis* (HAMZEHEE ۱۹۹۲), *Dinebra retroflexa* (MOZAFFARIAN ۱۹۹۴) and *Poa golestanica* ((SCHOLZ & AKHANI ۱۹۹۹).

کلمات کلیدی:

Gramineae, new records, geographical distribution, Iran
