خلاصه مقاله:

Let G be a group and N be a normal subgroup of G . In this paper, we provide some results on c-covers of a pair of groups. Moreover, we prove that every c-perfect pair of groups (G, N) admits at least one c-cover and also we show that a c-cover of a pair of finite groups has a unique domain up to isomorphism under some assumptions.

کلمات کلیدی:

Pair of groups, Covering pair, Isoclinism of pair of groups
