خلاصه مقاله:

This paper introduces some properties of separation axioms called α -feeble regular and α -feeble normal spaces (which are weaker than the usual axioms) by using elements of graph which are the essential parts of our α -topological spaces that we study them. Also, it presents some dependent concepts and studies their properties and some relationships between them.

کلمات کلیدی:

alpha-feeblely regular, alpha-quasiregular, alpha-feeblely normal
