

عنوان مقاله:

AN ITERATIVE METHOD WITH SIX-ORDER CONVERGENCE FOR SOLVING NONLINEAR EQUATIONS

محل انتشار:

مجله بین المللی مدل سازی و محاسبات ریاضی، دوره 2، شماره 1 (سال: 1391)

تعداد صفحات اصل مقاله: 7

خلاصه مقاله:

Modification of Newtons method with higher-order convergence is presented. The modification of Newtons method is based on Frontinis three-order method. The new method requires two-step per iteration. Analysis of convergence demonstrates that the order of convergence is 6. Some numerical examples illustrate that the algorithm is more efficient and performs better than classical Newtons method and other methods.

کلمات کلیدی:

Nonlinear equation, iterative method, Two-step, Convergence order, Efficiency index
