## خلاصه مقاله:

Relieving and healing pains, providing respect to the humans, protecting their lives and well-being of their souls and psyche and trying to establish mutual friendship and understanding and sustainable peace among nations are the main factors of any organization, establishment or agency's charter whose objective is helping mankind, development, training and humanitarian efforts. We have Jesus Christ in the mankind's history who was crucified. Mark the Evangelist relates the story of the Christ in the Gospel and says while he was losing his life on the Cross gradually, all the passersby ridiculed him and said he will be regarded as a wrongdoer. High priests and religious leaders who were present there mocked him and said, "He would well save the others and now he cannot rescue himself". Our article is based on this issue that in the present time, fewer peace loving, optimistic and kind people have a say, where the cross used to crucify the Christ becomes the symbol of peace in the history of mankind. The significance of this study is to get to world wide solutions in the communication era as the satellite internet is beginning to emerge. Our question in the age of internet and with the domination of Corona on the international relations is how it endangered the international security and in the same time managed to indicate the world is interrelated. War kills people and corona takes a lot of lives due to pandemicity. Therefore we have to know and are obliged to lead the world to interaction, friendship and peace. This article will use documentary method. In conclusion, relieving human pains will be possible by moving towards self-awareness and theology. Providing respect for people is realized by proper and disinterested training. Protecting people's life and spiritual health by identifying the ways of scientific and logical development of health education which is acquired by protection from disease and trying to reach peace, understanding and interaction by following a scientific and practical structure by politicians are among the results of this study which will be mentioned as health factors.

## کلمات کلیدی:

self-awareness-theology, peace seeking, Corona, interrelated world, development and respect to humans, politicians plans in health sector
