خلاصه مقاله:

As technology progress, the development of telecommunication industries, the construction of new electrical devices, and their application in human life have affected human health in various ways. Some of the devices that emit electromagnetic waves and are exposed to humans include Cell Phones, TV, Computers, cellular networks, and base transceiver station towers. The brain is one of the parts of the human body that is constantly affected by these waves. The paper aims to study the effects of cell phone electromagnetic waves on the human brain.

کلمات کلیدی:

.Cell Phone, Electromagnetic Waves, Human Body, Human Brain
