خلاصه مقاله:

In recent years, substantial and appearance differences debate of past and present architecture of Iran's mosques have attracted many attention. In this regard, one of the most important factors is the identification of satisfaction factors and investigation of the people's reason for satisfaction of the past and contemporary Iranian mosques and the adaptive compartment the desired mosques in these contexts. An inseparable relation between Islam and the mosque has given a greater sensitivity to the field of contemporary architecture. It seems that the people's role as the main users of mosques should be observed in the area of the mosques. In the field of comparing of difference dimensions and union dimension of the past and present mosques in Iran, previously researches have been done which each of them compares one aspect of the mosque's aspect, but it is discussed less about the factors and people's satisfaction level of the mosque architecture. So, due to the admissibility debate of the mosques architecture with their audience, this issue is necessary. Therefore, the main research question is that how is the people's satisfaction rate from the past and contemporary mosques? In this study, it is tried, without any prejudice, public opinion about the satisfaction from the various aspects of different aspects of mosques architecture compare by a adaptive and survey method. To do this, first, the conceptual framework has been developed, then involved variables in the people's satisfaction of the mosques architecture have been identified according to the research objectives. Seven mosques have been selected that three mosques are from the Safavid period and four mosques are from the contemporary period in Tehran. Statistical population have been selected of the people who experience at least one time being in mosque and about ۱۴۰۰ people have been considered. On this basis and Cochran equation, about ۳۰۰ questionnaires were distributed between people and their answers to the different methods were collected and then were placed in a adaptive comparing. Some results can be briefly noted: ۱. more than half of the people, in general are satisfied of the architecture of contemporary mosques and past mosques. ۲. in the interior and exterior spiritual beauty, past mosques have achieved a significant degree of the public satisfaction. ۳. in certain factors, including the uniform space, more light in the interior, suitable connection to the climate comfort and lines, modern mosques have a slight ... advantage. However, the aim of this research is to provide guidelines for the mosque designing, so, it se
