خلاصه مقاله:

The city as the bed of human life has a fundamental role in the feeling of satisfaction and in fact shapes the lifestyle of human and determines his quality of life. There is always a reaction between the structure of the city, the architecture of the building and the quality of urban life, and each affects and is influenced by the other. On the other hand, several factors affect the quality of urban life, which can be natural disasters such as floods, earthquakes, epidemics and artificial disasters such as war, famine and ect. What is studied in this article is the study and recognition of the emergence of pandemic diseases (in this study, Covid-19) in cities that affect human life in different urban dimensions. Therefore, the role of architects, designers and planners in improving the quality of life and organizing the physical structure of the city to prevent and control the epidemic is important.

کلمات کلیدی:

City; Architecture; Quality of life; Pandemics ; Potential spaces; Homes of Health
