خلاصه مقاله:

Urban planning area is an important public policy of the government and a toolkit for growth of countries, in this regard Iran has long been known for its cities. However investigation on internal trends of urban growth are neglected. Aim of this study is to provide an overview of internal dynamics of urbanization process. For this, internal dynamics and potentials of Spatial (re)structuring in urbanization process will be investigated by utilizing scientific method on the case studies from Iran's major cities. Based on an in-depth literature review of different typical areas four cities selected indifferent constituencies and respected influential patterns on Spatial (re)structuring change in previous decades investigated. Land use and land cover patterns, as well as socio-demographic, geographical, and density changes in the research areas, are all factors. In terms of internal dynamics for spatial (re)structuring over the previous four decades, the obtained data show a declining tendency in Shiraz and Tehran cities, a stable increase and rapid drop in Tabriz city, and a fluctuation in Isfahan city.
