خلاصه مقاله:

Creativity as one of the most important factors of education is taken into consideration in recent years and psychologist and thinkers of education try to define and regulate a system and methods that are able to reinforce Creativity Power of people. This problem has been discussed and analysed by art and architecture fields since a long time ago and up to now also different solutions have been posed in different books and articles for training creative artists and architectures. The first and the most general question which we encounter usually at the beginning of discussion, whether in lesson class or in specialized discussions is this that; how we can increase creativity power of people, or is creativity trainable and learnable? In discussions which will be posed continually, while we will answer to .given questions, will proceed to creativity role in education, especially art and architecture education

کلمات کلیدی:

human, architecture, education, creativity
