خلاصه مقاله:

Let $S=K[x_1, \dots, x_n]$ be a polynomial ring over a field K and $\subset S$ be a monomial ideal with a linear resolution. Let $\frac{m}{(x_1, \dots, x_n)}$ be the unique homogeneous maximal ideal and $\frac{I}{(m)}$ be a polymatroidal ideal. We prove that if either $\frac{I}{(m)}$ is polymatroidal with strong exchange property, or I is a monomial ideal in at most r variables, then I is polymatroidal. We also show that the first homological shift ideal of polymatroidal ideal is again polymatroidal.

کلمات کلیدی:

polymatroidal ideals, monomial localization, linear quotients, linear resolution, homological shift ideal
