خلاصه مقاله:

By examining scientific productions in each field, it is possible to make strategic plans in carrying out research policies, evaluate and control the resulting progress, and improve the quality of research activities. The purpose of this study is to analyze the content of the quality of research projects and articles in Masih Daneshvari Hospitals Research Vice-Chancellor in ۱۴۰۰-۱۴۰۱. This descriptive study analyzed the content and citations of ۱۰۰ articles published in reputable journals and ۱۰۰ research projects carried out at the Research Vice-Chancellor of Masih Daneshvari Hospital during the years ۱۴۰۰ to ۱۴۰۱. In this research, by using a checklist and referring to individual titles, contents, and citations of articles and projects, information was collected and then entered into Excel software and analyzed. The validity of the checklist was confirmed by the opinion of expert professors. Descriptive statistics methods were used in the data analysis, such as data classification according to frequency distribution and frequency percentage, average and drawing graphs. Out of ۴۰۰ authors in ۲۰۰ articles and research projects, most authors (۶۰%) were men. Most of the people in the specialized doctorate level (۲۵۶ people) had the university rank of assistant professor (۱۱۱ people), affiliated with Shahid Beheshti University of Medical Sciences (۱۴۰ cases). Most of the articles and research projects (۳۰۰ articles and projects) are of descriptive type, the most used tools are questionnaires (۸۰ cases) and the most used descriptors are hospitals (۳۰ cases). The most types of published research articles (۱۶۰) and the most studies (۹۰ titles) were the result of the approved research plan. The behavioral pattern of writers should be led to write articles and analytical research projects and use diverse and new research methods in the field of information management in the field of healthcare.

کلمات کلیدی:

research projects, articles, research assistant, Masih Daneshvari Hospital
