خلاصه مقاله:

In general, age has a significant impact on children's learning of English. Studies show that the best time to start learning English is younger than ۱۰ years old. At this age, children naturally interact with the new language and are able to learn it easily. Also, at this age, they don't need to learn grammar rules and they get to know language rules automatically. At older ages, language acquisition automatically decreases, and to learn the language properly and effectively, you need to learn grammar and grammar rules. In addition, in old age it may take a long time for a person to be able to learn the language in an acceptable manner. Therefore, age is one of the important factors in learning English and children have a better chance to learn it at a younger age. For this reason, it is better to introduce children to English at a younger age so that they can have the best opportunity to learn the language

کلمات کلیدی:

age, learning English, children
