## خلاصه مقاله:

The current research was conducted with the aim of investigating the characteristics of the online education method to attract learning in children. This research is an applied and descriptive-survey research in terms of its purpose. The statistical population of this research is made up of all elementary school students in Tehran, whose number is considered uncountable. In this regard, relying on Cochran's formula, ۳۸۵ people were selected as a sample. In this research, a standard questionnaire was used to collect information, and its validity and reliability were checked and confirmed. Finally, partial least squares method and smartPLS software were used to analyze the data. The results showed that the online education method has a significant effect on the absorption of learning in children.
