خلاصه مقاله:

Based on specimens collected from East and West Azerbaijan provinces during ۲۰۱۴–۲۰۱۶, fourteen species of the family Asilidae are collected and identified. Two of them, e.g. *Dysmachus transcaasicus* Richter, ۱۹۶۲; *Saropogon megriensis* Richter, ۱۹۶۶ are recorded from Iran for the first time. All species are listed along with their geographic distributions. Diagnostic characters as well as supplementary photos of new records are provided.

کلمات کلیدی:

Asilidae, East Azerbaijan, west Azerbaijan, Iran, new records
