خلاصه مقاله:

A field survey of the bee fauna was conducted in the north of Iran during ۲۰۰۹ to ۲۰۱۵. Special concern was given to the tribe Ceratinini (Hymenoptera; Apidae). Ten species of the genus *Ceratina* were collected and identified in the present study. Three species are recorded for the first time from Iran, including *Ceratina* (Euceratina) *chrysomalla* Gerstaecker ۱۸۶۹, *Ceratina* (Euceratina) *cyanea* (Kirby, ۱۸۰۲) and *Ceratina* (Euceratina) *gravidula* Gerstaecker, ۱۸۶۹. An updated checklist of Iranian Ceratinini with short description and figures of newly recorded species are provided. The host plants and distribution of each species are also given.
