## خلاصه مقاله:

Due to the socialist economy approaches in Iran, the Iranian economy is heavily dependent on government. This fact is the main weakness of Iranian economy. With 4th rule of constitution that many experts called an economic revolution; the aim is Iranian economy transformation from centralized economy into free economy. This paper explores a brief history of Iranian economic transition, fundamental principles and some strategies for this transition. At the end of this paper we introduce a model for transition from planned economy to market economy that it's derived from RAMAZANI cybernetic planning system

## کلمات کلیدی:

planned economy, market economy, transition system, transition subsystem
