خلاصه مقاله:

Introduction: With regard to the admission of Hijab as one of the most important and fundamental principles of Islam for women, and its role in intellectual, political, and social independence, this study was conducted aiming at comparing the attitudes of young and middle aged people toward the superior Hijab. Method: This study is a cross-sectional survey statistical population was ۸۲۳ young and middle aged individuals who referred to the medical centers of one of the medical science universities of Tehran in ۲۰۰۵. The data was collected with the researcher's prepared questionnaire and analyzed using SPSS ۱۵ software, and statistical techniques such as frequency, percentage, mean, standard deviation and chi square. Results: There is significant difference (p
