خلاصه مقاله:

The Compressible MHD resistance equations were written for the IR T₁ tokamak configuration with one or two singular surfaces for density mass profiles. And they are linearized around equilibrium state. The eigenvalues and eigenfunctions of the resistive MHD modes were obtained for poloidal and toroidal mode numbers numerically by Mathematica software for homogeneous and inhomogeneous plasma. The values obtained show that the eigenvalues are complex, and they are placed on certain curves. Also by drawing a diagram of eigenfunctions, it was determined that they were damped.

کلمات کلیدی:

Tokamak, MHD Spectra, Resistive Spectrum
