خلاصه مقاله:

In this study a total of four *Calotes versicolor* specimens (three males, one female), collected in different localities from April ۲۰۱۳ to March ۲۰۱۴ in Southeast of Iran were examined. The study was based on morphological features including color pattern, morphometric measurements, habits, biological observations especially habitat and distribution. Habits features, habitat and new distribution localities were documented. This is the first record of *Calotes versicolor* from the Kalesari village is ۴۴ km away from the last record in Nahang River

کلمات کلیدی:

Agamidae, *Calotes versicolor*, distribution, Habits, Habitats, Iran
