خلاصه مقاله:

Let G be a group and R, L, S be subsets of G such that $R=R^{\{-1\}}$, $L=L^{\{-1\}}$ and $\not\in R \cup L$. The undirected graph $\text{SC}(G; R, L, S)$ with vertex set $\text{union of } G_1 = \{g \mid g \in G\}$ and $G_2 = \{g \mid g \in G\}$, and edge set the union of $\{(g_1, gr_1) \mid g \in G, r \in R\}$, $\{(g_2, gl_2) \mid g \in G, l \in L\}$ and $\{(g_1, gs_2) \mid g \in G, s \in S\}$ is called semi-Cayley graph over G . We say that $\text{SC}(G; R, L, S)$ is quasi-abelian if R, L and S are a union of conjugacy classes of G . In this paper, we study the automorphism group of quasi-abelian semi-Cayley graphs.

کلمات کلیدی:

Semi-Cayley graph, quasi-abelian semi-Cayley graph, automorphism of graph
