خلاصه مقاله:

This case report is a ۶۵ year old woman from Kerman. Her main complian is nasal obstruction and recurrent nasal bleeding from five months ago. In clinical examination there was a large tumor in left nasal cavity. CT scaning revealed a large tumor in left nasal cavity and maxillary sinuse. The tumor is resected compeletely with negative safe margine by radical caldwell- luc approach. The origin of tumor was from inferior turbinate. The diagnosis is mesenchymal .sarcoma. These sarcomata are very rare in nasal cavity

کلمات کلیدی:

Sarcoma, Nasal cavity
