خلاصه مقاله:

This cross-sectional study was carried out during the year ۱۹۹۰ at Shahid Bahonar hospital of Kerman. During this period ۱۳۵۰ patients were admitted, ۵۳% of whom were below the age cases occurring between ۳ to ۷ pm. The highest rate of admission was in summer. The average stay at the hospital was ۷.۲ days and the mortality rate in these patients was ۸.۱۴% , twenty four of whom (۲۲.۲%) expired a few minutes after admission. Out of the total number of admitted patient ۱۰۶(۷.۸%) had a surgical operation.

کلمات کلیدی:

Epidemiology, head injury
