خلاصه مقاله:

The number of people living in urban areas, especially large cities, has increased rapidly over the past few decades. As a result, the legal boundaries of such cities are likely to change to metropolitan areas. In order to lessen the negative consequences of this trend, such as social and economic inequality, recognizing such metropolitan areas in their early stages of development and proposing suitable plans for them is extremely important. This essay aims to assess the suitability of recognizing Khorramabad - a city in Iran - as a metropolitan area based on its vicinity and the potentials of cities like Aleshtar, Bayranshahr, Zaghe, Sarab-e-Dowreh, Firuzabad, and Veysian. This is done by leveraging a suit of descriptive and analytical methods, where the results indicate that Khorramabad and its periphery meet the criteria to be identified as a metropolitan area. In order to define the boundary of this area, it is essential to prepare Khorramabad's metropolitan area plan, which is done as part of the proposed strategic plan.

کلمات کلیدی:

Khorramabad, Metropolitan Areas, Strategic Planning, Urban Management
