خلاصه مقاله:

The purpose of this study was to propose and test a motivational model of creativity. The model posits social agents such as parents factors influence children's perception of self-determination. The less autonomy supportive the social agent's behaviors are. The less positive are children's perception of autonomy. In turn, the less positive children's perception are, the lower their levels of self-determined. Finally, low levels self-determined motivation lead to low creativity. educational father and socioeconomic status are factors in effect self-determination. This model was tested with elementary school students. Results from analyses with path analysis were found to support the model for all participants.

کلمات کلیدی:

Self determination, Creativity, Parenting styles
