خلاصه مقاله:

The genus *Alburnoides* Jeitteles, ۱۸۶۱ in Iran is reviewed, and diagnoses are presented for all eight recognized species. *Alburnoides eichwaldii*, *A. holciki*, *A. idignensis*, *A. namaki*, *A. nicolausi*, *A. petrubanarescui*, *A. qanati* and *A. tabarestanensis* are considered valid and three new species are described: *Alburnoides coadi* sp. n., from Namrud River in Kavir basin, *A. parhami* sp. n., from Atrak River in the south-eastern Caspian Sea basin, and *A. samiii* sp. n., from Sefidroud River in the southern Caspian Sea basin. All species, except unstudied *A. petrubanarescui* are illustrated and characterized morphologically.

کلمات کلیدی:

New species, Taxonomy, Freshwater fishes, Alburnini, Spiralin
