خلاصه مقاله:

The issue of raising the level of participation and people's participation in the planning process was initially only one of the responses of thinkers to the developments in the society and the change of the traditional planning process. In the following years, the theories of participation became very popular among planners and extensive discussions took place among them. Since then, how to shape this process has become one of the most challenging topics in urban planning. Participatory planning ideas come from political issues and are highly dependent on social and political ideas. In this article, an attempt has been made to examine the formation of these views throughout history and its social, political and cultural contexts. The present research seeks to answer questions such as: What is the position of participatory planning theories among other theories? What is its meaning? Since the beginning of the formation of the field of urban planning, how has the participation of citizens been viewed? The study of books and articles has shown that from the beginning to the 1960s, the participation of citizens was ignored, and basically experts considered a very small and insignificant contribution to the participation of citizens. With the failure of the traditional, comprehensive rational planning process and comprehensive plans in the West, this approach was taken into consideration and social issues became very important. These theories, like other theories, have advantages and disadvantages, which have been discussed in the article.

کلمات کلیدی:

Participatory planning, theories of urban planning, public participation, social learning, new theories of urban planning
