## خلاصه مقاله:

There are too many terms including: auto gas lift , in-situ gas lift , internal gas lift and gas cap gas lift which present the concept of natural gas lift . Briefly speaking, natural gas lift is getting assistance from natural energy of underground gas reservoirs for lifting and extraction of liquid petroleum to the surface. In current paper we will focus on global application of natural gas lift and notice the privileges of its usage. Surely this new method of completion has many challenges, which we review some of them. At the end there is a glance view about some of the main equipment. Purpose of this article is introducing different aspects of NGL and its viability to apply in our national oil fields.

## کلمات کلیدی:

natural gas lift, auto gas lift, in-situ gas lift, internal gas lift, gas cap gas lift
