خلاصه مقاله:

Importance of climate and its effects on life are obvious to everyone. Climate has a key role in choosing a tourism destination and hence its effects on local economy. In this research we tried to use meteorological data from a 20 year period (1991-2011) and also make use of thermal-comfort index to evaluate adequate months for human physiological comfort in city of Sarakhs. The results of monthly evaluation which is done according to climatic comfort quality indicate that months of April, May and October are the best months to travel to Sarakhs. It seems that city of Sarakhs has adequate conditions for spring trips.
