## خلاصه مقاله:

The integrated coastal zone management project started in order to organize the state coastal zone condition as one of the most sensitive parts of the country. One of the most important pillars of this project is environmental identification of coastal areas and of elements affecting ports. [1], [2] Role of information management systems is undeniable due to the multiplicity and diversity of the country's coastline documents along with use-specific conditions, demographic, land and sea environmental pollution conditions, development projects under implementation and other relevant factors

## کلمات کلیدی:

Information, ICZM, Gap Analysis, GDMS
